

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of claims:

5 Claims 1-11 (canceled)

 Claim 12 (new): A method for transmitting data in a communication system, wherein the data is at least one of text data and image data with or without sound and includes individual data elements that are coded to
10 standards which may be different, the method comprising:

 performing at least one of a data type and a data format conversion in accordance with a profile of a receiver of the data; and

 updating a link, after the conversion, to maintain a validity of the link in the data between the different data elements.

15

 Claim 13 (new): A method for transmitting data in a communication system as claimed in claim 12, wherein the conversion is performed at a provider of the receiver.

20 Claim 14 (new): A method for transmitting data in a communication system as claimed in claim 12, further comprising verifying the link in the data between different data elements.

 Claim 15 (new): A method for transmitting data in a communication
25 system as claimed in claim 12, further comprising preparing the data for transmission as a plurality of data packets containing a header to transport organization information and a body to transmit appropriate payload information as the data elements.

Claim 16 (new): A method for transmitting data in a communication system as claimed in claim 12, wherein the data is transmitted as a multimedia message in a Multimedia Messaging Service.

5 Claim 17 (new): A method for transmitting data in a communication system as claimed in claim 16, wherein the data is transmitted on a WAP-enabled mobile phone.

 Claim 18 (new): A communication system for data transmission,
10 comprising:

 a first subscriber terminal for transmitting data, wherein the data is at least one of text data and image data with or without sound and includes individual data elements that are coded to standards which may be different;

 an apparatus for receiving the data from the first subscriber terminal
15 wherein the apparatus performs at least one of a data type and a data format conversion in accordance with a profile of a second subscriber terminal which is to receive the data, and updates a link, after the conversion, to maintain a validity of the link in the data between the different data elements; and

 a second subscriber terminal for receiving the converted and updated
20 data from the apparatus.

 Claim 19 (new): A communication system for data transmission as claimed in claim 18, wherein the apparatus is a provider of the receiver.

25 Claim 20 (new): A communication system for data transmission as claimed in claim 18, wherein the link in the data between different data elements is verified.

 Claim 21 (new): A communication system for data transmission as
30 claimed in claim 18, wherein the data for transmission is prepared as a plurality

of data packets containing a header to transport organization information and a body to transmit appropriate payload information as the data elements.

5 Claim 22 (new): A communication system for data transmission as claimed in claim 18, wherein the data is transmitted as a multimedia message in a Multimedia Messaging Service.

10 Claim 23 (new): A communication system for data transmission as claimed in claim 22, wherein the first subscriber terminal is a WAP-enabled mobile phone.

15 Claim 24 (new): A computer program product having a computer-readable storage medium on which a program is stored which, upon loading on in a memory of a computer, enables the computer, as part of a data transmission in a communication system, to receive data from a subscriber of the communication system, wherein the data is at least one of text data and image data with or without sound and includes individual data elements that are coded to standards which may be different, to perform at least one of a data type and a data format conversion in accordance with a profile of a further
20 subscriber of the communication system to receive the data, and to update a link, after the conversion, to maintain a validity of the link in the data between different data elements prior to the data being sent to the further subscriber.
